STEP BY STEP

Install Fraxx

Fraxx is a **web app** (PWA). There is no installer to download: you open the address once in your browser and add the app from there. After that Fraxx has its own icon, opens without the browser bar and also works **offline**.

Scan with your phone camera

Open Fraxx → https://jm-berlin.github.io/fraxx/

Tap or click the button: Fraxx opens directly in your browser. Then continue with step 1.

1 Add the app

iPhone and iPad (Safari)

1. Open **Safari** (not Chrome) and go to the address above.
2. Wait until the start page has fully loaded.
3. Tap the **Share icon** (square with an arrow pointing up). On iPhone it is at the bottom, on iPad at the top right.
4. Scroll down the list and tap **“Add to Home Screen”**.
5. The name “Fraxx” is already filled in. Tap **“Add”** at the top right.
6. The Fraxx icon appears on your home screen. From now on, start the app from there.

Android (Chrome)

1. Open **Chrome** and go to the address above.
2. Often a prompt **“Install Fraxx”** appears at the bottom. Tap it and confirm with **“Install”**.
3. If no prompt appears: tap the **menu** ⋮ at the top right → **“Install app”** (on some devices “Add to Home screen”).
4. The icon appears on your home screen and in the app drawer.

Windows and Mac (Chrome or Microsoft Edge) – recommended on Mac

1. Open **Chrome** or **Edge** and go to the address above.
2. Click the **install icon** on the right of the address bar (a screen with an arrow or plus).
3. Alternatively in Chrome: **menu ⋮ → "Cast, save and share" → "Install page as app …"**
4. In Edge: **menu … → "Apps" → "Install this site as an app"**
5. Confirm with **"Install"**.
6. Fraxx opens in its own window and appears in the Start menu (Windows) or in the Applications folder and Dock (Mac).

Mac (Safari, macOS Sonoma or later)

This works too, but on Mac Safari only has the system voices. For the best pronunciation, use **Chrome** instead (see above and section 3).

1. Open the address in **Safari**.
2. Menu **"File" → "Add to Dock …" → "Add"**.

Firefox cannot install web apps on desktop. You can still use Fraxx normally in the browser there, or use Chrome, Edge or Safari to install it.

2 First start

1. **Choose your source language:** If a window "Which language do you speak?" appears, tap your language. You can change it later under ⚙. If no window appears, Fraxx starts in German.
2. **Language packs:** On first start Fraxx downloads German, English, French, Italian and Spanish. Depending on your connection this takes a few seconds (about 2–3 MB in total). Please stay online meanwhile.
3. Done. From now on everything also works **without internet**: the table, pronunciation (using your device's voices), quiz, grammar, menu and cheat sheet.

3 Better pronunciation

Fraxx speaks with the voices of your device or browser and automatically picks the best one it finds.

- **Mac and Windows: Chrome** additionally offers Google's natural-sounding voices, **Edge** Microsoft's "Natural" voices. Fraxx uses them automatically. They need an internet connection; offline the computer uses its own voices.
- **iPhone and iPad:** All browsers use the same voices here, so Chrome makes no difference. It sounds better with the high-quality voices: **Settings → Accessibility → Spoken Content → Voices** → choose a language → download a voice marked **"Enhanced"** or **"Premium"**.
- **Mac (for travelling without internet): System Settings → Accessibility → Spoken Content → System voice → Manage Voices** → download an "Enhanced" or "Premium" voice for each language.
- **Android: Settings → Accessibility → Text-to-speech output** (on some devices under System → Languages) → under "Speech Services by Google", download the voice data for your languages so it also works offline.

Tip: Download the voices at home on Wi-Fi before you travel. Then Fraxx sounds good even without internet.

4 Add more languages

1. Tap ⚙ at the top → **"App, Sprachpakete & Sicherung"** (app, language packs & backup).
2. Under **Sprachpakete** you see all available languages. "Standard" ones are already installed, "optional" ones can be added.
3. Tap **"Laden"** (load) next to a language. It is immediately available in the table, quiz, grammar and menu.
4. **"Entfernen"** (remove) frees the storage again. Your own entries are kept.

5 Back up your own entries (recommended)

Your own entries and changes are stored **only on this device**. To take them to a new device:

1. ⚙ → **“App, Sprachpakete & Sicherung”** → **“Sicherung herunterladen”** (download backup).
2. Save the file, e.g. in iCloud, Google Drive or OneDrive.
3. On the other device: install Fraxx → ⚙ → **“Sicherung einlesen”** (restore backup) → choose the file.

Fraxx reminds you automatically: once you have entries of your own, a notice with **“Jetzt sichern”** (back up now) appears after 14 days without a backup (and every 30 days after that).

Important: Clearing the normal browser cache is harmless. **Clearing “site data” / “cookies and other site data”**, however, also removes your own entries. Back up first!

6 Your own translations (coming soon)

The language packs already contain more than 6,400 ready-made translated entries. Automatically translating new words and sentences of your own is not yet enabled in this test version. This feature will come in a later version.

7 Updates

Updates arrive automatically: every time Fraxx starts with an internet connection, it checks for a new version or new language packs and downloads only what has changed. To check manually: ⚙ → **“Nach Updates suchen”** (check for updates).

8 Uninstall

- **iPhone/iPad:** long-press the icon → “Remove App”.
- **Android:** long-press the icon → “Uninstall”.
- **Windows/Mac (Chrome/Edge):** open the app → menu ⋮ at the top right → “Uninstall Fraxx”.

Download a backup first if you want to keep your own entries.

? Troubleshooting

Problem	Solution
No “Add to Home Screen” on iPhone	The page must be opened in **Safari**, not in Chrome or another app.
No install icon on the computer	Use Chrome or Edge. If Fraxx is already installed, the button says “Open in app” instead.
No or robotic pronunciation	No (good) voice is installed for that language. See section 3, “Better pronunciation”.
A language pack does not load	Check your internet connection and tap “Laden” again under ⚙.
